

HPC Workshop 2023

Upward Bound – Day 2

<https://uwec.ly/hpcworkshop>

Go to for downloads, links
and a full schedule!

Please log into your machine when you take a seat.

Last Week...

Intro to HPC, Computational Science, Linux

Mammoth and Mitchell
Blugold Center for HPC

Informatics in music

Dr. Ben Fine
Computer Science

Building “trees” in South African shrubs

Dr. Nora Mitchell
Biology

SCIENCE • TECHNOLOGY • ENGINEERING + ARTS • MATHEMATICS

© Iowa PBS

Panel Discussion on STEAM careers with:

Tyler Bauer (Blugold Center for HPC)

Dr. Sudeep Bhattacharyay (Chemistry + Biochemistry)

Dr. Ben Fine (Computer Science)

Dr. Nora Mitchell (Biology)

Dr. Bill Wolf (Physics + Astronomy)

Task:
Our boss
wants
photos

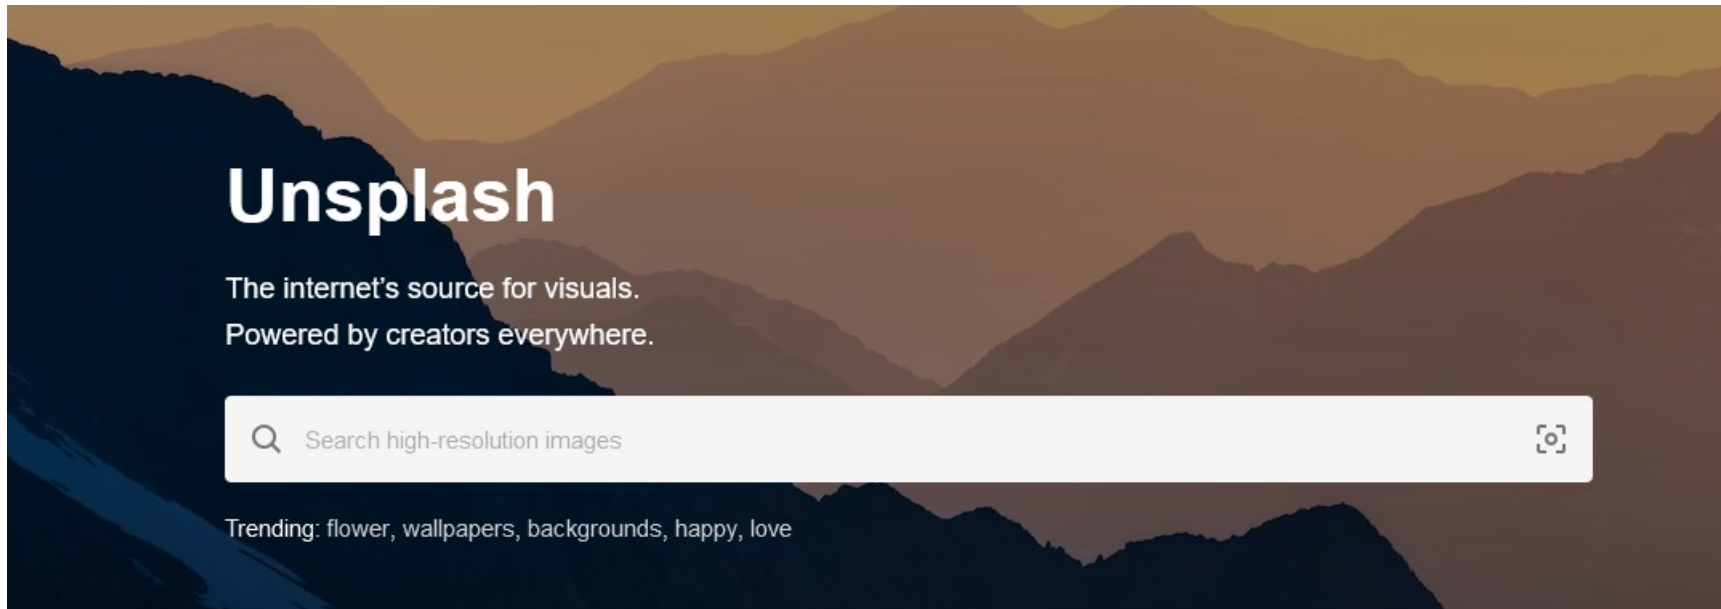

Workshop Website

OPEN

 **nDemand**

<https://ondemand.hpc.uwec.edu>

You can also get to OnDemand from our webpage

OnDemand - Login

Welcome to BOSE!

You appear to be a new member of the cluster, so there are a few steps you'll need to accomplish first before you're able to use this system.

1. Click [this button](#) to access the terminal / shell version of BOSE first.
2. You'll be asked to enter your UWEC password and trigger the Duo Authentication process.
3. Once logged in, go through and accept our Terms Of Service.
4. After you accept the terms, you can close out of that tab once you are presented with [username@bose ~].
5. Finally, click [this button](#) to log in again.

Already used BOSE and are getting this message, or this message isn't going away after going through the steps? Please contact us at BGSC.ADMINS@uwec.edu.

- Blugold Center for High Performance Computing

New Task:
Our boss
wants text art
(aka ASCII)

Python

THE BASICS

What is Python?

- Increasingly popular programming language
- Considered easy to learn and understand
- Supports interactive programming (e.g. Jupyter)
- 137,000+ Libraries Available
 - Code created by other people to make everyone's life easier

What is it used for?

- Task Automation
- Artificial Intelligence, Machine Learning, Deep Learning
- Data Analysis
- Data Visualization
- Game Development
- Websites

OnDemand - Jupyter

Initial Steps

- Choose these Settings:
 - Account Group: ub_workshop_2023
 - Slurm Partition: Week (7 Days) – Default
 - CPU Cores: 4
 - Memory: 10G
 - # GPU Cards: No GPUs – Default
 - Number of Hours: 3
 - Working Directory (Leave empty)
- Hit "Launch"

Jupyter Notebook version: v1.0.1-3-g94d29b4

This app will launch a Jupyter Notebook server.

Accounting Group

ub_workshop_2023

Which research/class account is this tied to?

Slurm Partition

Week (7 Days) - Default

Which partition are you running the job on?

CPU Cores

4

How many cores do you want to request? (Max of 64)

Memory

10G

How much memory do you want to request? M = Megabytes, G = Gigabytes

GPU Cards

No GPUs - Default

(GPU Partition Only) How many GPUs would you like to reserve? 0 = No GPU needed, max of 3. Please do not use multiple GPUs if you do not need them.

Number of hours

2

How long do you intend to keep Jupyter Notebook running? Note that the server automatically will shut down and this form will have to be resubmitted when the time is up. Your work will typically be saving automatically throughout the duration of your notebook being opened.

Initial Steps

- Wait until Running.... Then hit “Connect to Jupyter”
- Click on your ”Day_2” Folder
- Click on your “Session_4” Folder
- Click on “DoWork.ipynb”
- You’re in a Jupyter Notebook!

Jupyter Notebook (29165) 1 node | 4 cores | Running

Host: [>_cn01](#) Delete

Created at: 2023-03-13 09:45:31 CDT

Time Remaining: 59 minutes

Session ID: [34d92c98-3fd5-4e7e-93a8-b258012cebb0](#)

[Connect to Jupyter](#)

Jupyter Notebook

- Supports variety of languages: Python, R, Ruby, C++, Stata
- Cell-Based = Run blocks of code at a time rather than everything at once
- Visually see tables, images, graphs, 3D renderings
- **How To Use:**
 - Each piece of code is in a “Cell” that must be ran individually
 - Run a cell by clicking “Run” or pressing “Shift+Enter”
 - Wait for results – “In [*]” on left means running, a number means done.

Let's code in Python!

Task 1: Variables

```
name = "Tyler"
```

Task 2: Display Our Name

```
print ("My name is " + print)
```

Make sure to press "Run" after each task!

Task 3: Get Photos

```
# How many photos do we want to process?
```

```
numPhotos = 3
```

```
# Find photos to change
```

```
photoList = findPhotos(numPhotos)
```

```
print("Photos Found: ", photoList)
```

Make sure to press “Run” after each task!

Task 4: Loops

```
# Loop through and process our images
for photoFileName in photoList:
    print(photoFileName)
```

← Put a space before “print”

Make sure to press “Run” after each task!

Task 4: Loops

```
# Loop through and process our images
for photoFileName in photoList:
    print(photoFileName)
    runPhoto(photoFileName)

print("All Done!")
```

← Put a space before “print”

← Put a space before “runPhoto”

← DON'T put a space before “print”

Make sure to press “Run” after each task!

Boss approves!

But we have a new problem...

What if there are thousands of photos?
That'll take too long!

New Task:
Make it *faster*

What do we do?

Any ideas?

BOSE

- 61 total machines
 - 4 GPU (12 total graphics cards)
 - 2 Large Memory
- 3,904 total cores
 - 61 x 64 cores
- ~18 TB total RAM
 - 57 x 256 GB
 - 3 x 1 TB

Processor / CPU

Brains of a computer

Runs instructions
like $1+1 = 2$

Can do multiple things at once
through its use of “cores”

Memory / RAM

Short term memory – not permanent

Works with the CPU to store what is actively being worked on

Very fast

Personal

4-core CPU
16GB RAM

Supercomputer

32-core CPU x 2
256GB RAM

Supercomputing Cluster

One

Many

High-Performance Computing

Jupyter Notebook version: v1.0.1-3-g94d29b4

This app will launch a Jupyter Notebook server.

Accounting Group

Which research/class account is this tied to?

Slurm Partition

Which partition are you running the job on?

CPU Cores

How many cores do you want to request? (Max of 64)

Memory

How much memory do you want to request? M = Megabytes, G = Gigabytes

Remember this?

We planned ahead and already requested four CPU cores for our program.

That means we can do four images at once!

But we have some more coding to do...

Let's do more coding!

Task 5: Multiprocessing

```
# Define a new list of photos  
photoList = findPhotos(10)
```

```
# Use all the cores!  
from multiprocessing.pool import Pool  
p = Pool(int(os.environ.get('SLURM_CPUS_ON_NODE')))  
p.map(runPhoto, photoList)
```

```
print("All Done!")
```

Uploading using
OnDemand

Python using
Jupyter

Running on Supercomputer
(High-Performance Computing)

We Did It!

Any
Questions?

Today's Schedule

Time	Who	What
9:00 – 10:15	Blugold Center for HPC	Coding with Python
10:15 – 11:30	Dr. Sudeep Bhattacharyay	The molecular machines in us
11:45 – 12:30	LUNCH	LUNCH
12:45 – 2:00	Dr. Rahul Gomes	When computers think like us
2:30 – 3:15	Faculty + Research Students	Panel discussion on careers in STEM education

Next Up

The Molecular Machines In Us

Dr. Sudeep Bhattacharyay, Ph.D.
Chemistry + Biochemistry
Professor

Pull up the website if you haven't already!

Website: <https://uwec.ly/hpcworkshop>

Lunch Break

BE BACK BY 12:45PM

Next Up

When Computers Think Like Us

Dr. Rahul Gomes, Ph.D.
Computer Science
Assistant Professor

Pull up the website if you haven't already!

Website: <https://uwec.ly/hpcworkshop>

Next Up – Panel Discussion

Let's move to room 102!
